

## Net Set Up Quick Guide

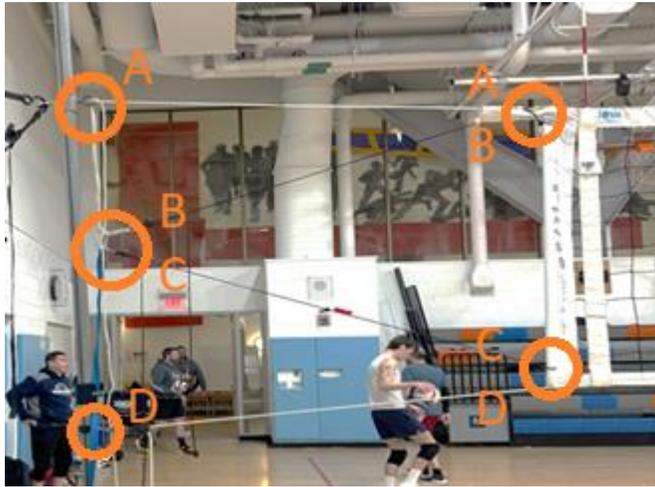

1. Poles in place and nets laid out/untangled.
2. Black ratchet lines (labelled per net) from wall anchors to the top of the poles, ratchet the lines so that there is no slack but don't tighten completely.

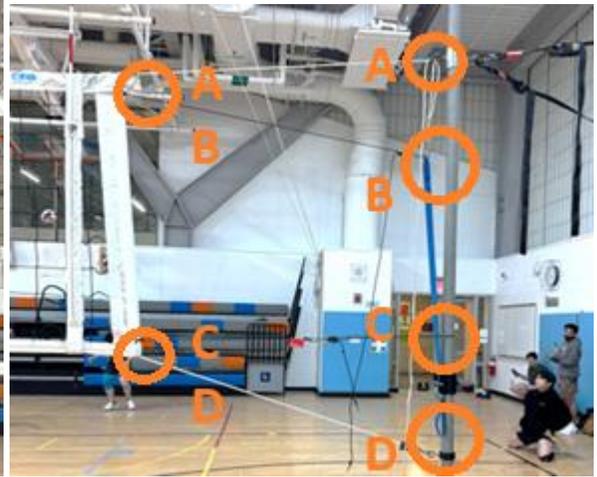

3. Attach nets to the top of the middle pole but leave the bottom unattached.
4. Attach nets to the top of the outer poles. This is done by threading the "net-line" through the ring at the top and attaching the loop on the line to to the blue strap. The net should be up, but not tight. This is the most difficult part, the loop to clip to the blue strap can be deceptively far down the line and will be difficult to put through the top ring. A chair or someone >6'5" will be required.
5. Tighten ratchets until taught/tight.

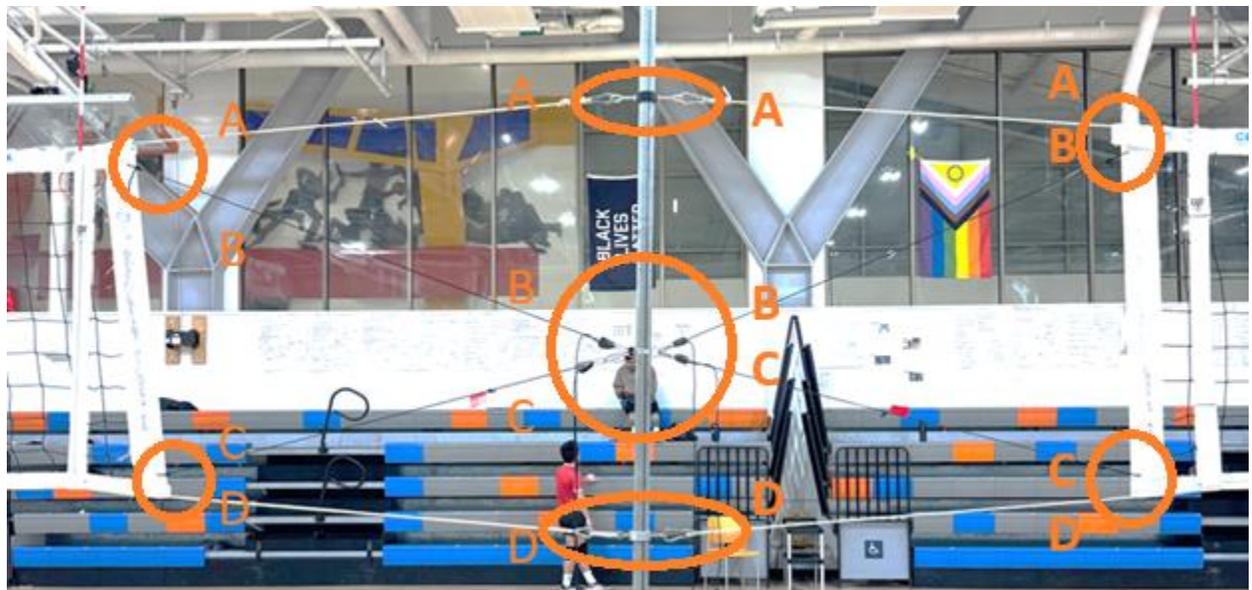

6. Pull down the blue strap until the nets are above the correct height.
7. Attach all the bottom of the nets and tighten to adjust net height down.
